EDUCATION

Georgia Institute of Technology, Atlanta, Georgia

May 2029

B.S. in Computer Science, Threads: Intelligence and Systems & Architecture

GPA: 4.00/4.00

Relevant Coursework: Intro to Computing, Object-Oriented Programming, Linear Algebra, Physics

Clubs: GT HackerHouse

TECHNICAL SKILLS

Languages & Frameworks – Python, Java, Swift, Dart, Flutter, HTML/CSS, JavaScript, TypeScript, Tailwind CSS, SwiftUI

Databases & Tools – SQL, Firebase, Git, GitHub, Xcode, VS Code, AWS, OpenCode, Claude Code

Certifications - AWS Certified Cloud Practitioner, Google Cybersecurity Specialization, IT Specialist - Java

WORK EXPERIENCE

Nexor Technologies, Remote – *Software Engineer (Contract)*

Jun 2026 – Aug 2026

- Cut trust intake from 1-2 hours of manual retyping to 5 minutes by developing AI-powered document extraction with TypeScript, Next.js, PostgreSQL and Anthropic Claude to convert trust documents into structured data for attorney review
- Automated property statement transcription across 12 financial categories, building an email ingestion pipeline with TypeScript, Claude structured outputs, Resend web hooks, and Azure Blob Storage that converts 10–20 line items from PDF/image attachments into reviewable ledger entries

Aitheria, Rogers, AR — *Software Engineer Intern*

Jan 2026 – May 2026

- Developed a production web platform for an AI music startup as technical lead on a 2-person team, delivering a 4-route, 7-section interactive experience using Next.js 16, React 19, TypeScript, and Tailwind CSS
- Deployed and launched the platform through Vercel with the company's custom domain, connecting the GitHub codebase and DNS to production while building the contact and lead-capture system with Next.js API routes, TypeScript, and Resend
- Presented Aitheria's platform and technical vision at 3+ entrepreneurial events, communicating product capabilities and business strategy to prospective partners, investors, and startup audiences

Velric.ai, Remote – *Front-End Development Intern*

Sep 2025 – Nov 2025

- Developed 2 core company web pages, using Next.js, TypeScript, and Tailwind CSS to build responsive, type-safe Home and Contact experiences with reusable component architecture
- Delivered a web platform scoring 89 Performance, 96 Accessibility, 100 Best Practices, and 100 SEO in desktop Lighthouse testing by implementing Next.js server-side rendering (SSR) and optimizing initial page delivery

WayPave, Rogers, AR — *Software Engineer Intern*

Jun 2025 – Aug 2025

- Built a real-time hiring analytics platform across 15+ restaurants, tracking interview-to-full-time conversion using Vue.js, Tailwind CSS, Firebase Authentication, and Firestore to surface actionable recruitment insights
- Developed live dashboards for 2 key hiring stages—interviews and full-time placements, implementing Firebase real-time updates to monitor restaurant-level conversion trends and support data-driven staffing decisions

Arvest Bank, Rogers, AR — *Information Security Intern*

Jan 2025 – May 2025

- Strengthened ransomware preparedness for 6,000+ employees by developing a mandatory, company-wide training program with interactive threat scenarios and a JavaScript, HTML, and CSS cybersecurity game integrated into the corporate LMS
- Presented the ransomware training initiative to the CISO and senior leadership, demonstrating the interactive training experience and explaining its approach to improving employee threat identification and incident response

PROGRAMMING PROJECTS

CareerOS | Python, FastAPI, Next.js 16, React 19, TypeScript, Firebase, Groq LLM

May 2026 – Present

- Built AI job discovery platform across 111+ ATS boards as measured by 32–38s query time and zero rate-limit errors, by architecting FastAPI with async httpx, asyncio Semaphore(8), and Groq batch matching with Pydantic v2
- Developed resume-to-role matching and cover letter generation as measured by one-click personalized outputs and full pipeline tracking, by implementing Groq matching scores, Firebase Firestore persistence, and Next.js 16 dashboard

VibeTexting | Python, FastAPI, React, ChromaDB, Ollama, SQLite, AppleScript

Apr 2026 – Present

- Engineered 100% local AI messaging assistant for 50+ iMessage threads as measured by zero cloud API calls and 5-second polling, by building Python CLI with SQLite parsing, AppleScript delivery, and few-shot vibe mimicry from 150+ messages
- Architected semantic memory pipeline with real-time dashboard as measured by persistent vector retrieval and cached image analysis, by integrating ChromaDB embeddings, LLaVA vision via Ollama, and FastAPI + React with multi-platform
